Cayley and MAGMA

If you have ever needed to use Cayley it's worth the effort to have a go at running MAGMA -- it has a more elegant structure, it's faster, has more user-friendly features, the structure of commands more closely resembles what mathematicians write and it will eventually supersede Cayley. Only a few functions that are available in Cayley remain to be rewritten as MAGMA functions. On the other hand MAGMA is able to do a great many things that Cayley cannot.
